

# 351M

## Electric strike 351M.80

The 351M.80 is a motorised electric strike to be used for double acting or single acting swing doors.

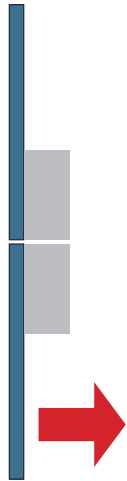

351M.80 operates in fail safe mode. Suitable for concealed mounting in door leaf or door frame. Can be mounted vertically or horizontally.

Surface mounting is optionally possible. Contacts for door monitoring and locked monitoring are potential free.

### Function

As soon as the door stays in aligned position with the electric strike, the prism shaped bolt moves motorised into the strike plate and locks the door. As long as power is on, the bolt is locked.

As soon as the power is switched off, the bolt gets immediately unlocked and the door is accessible. When moving the door, the V-shaped strike plate slides the bolt in – without electric power.
